Features

Serve: With our system, the waiter will be automatically notified when a dish is ready to be served to the customer.

Seat: The system will automatically seat waiting customers via a reservation and waiting list.

Clock in/Clock out: The system will automatically clock in and out workers at the appropriate times when they enter and leave.

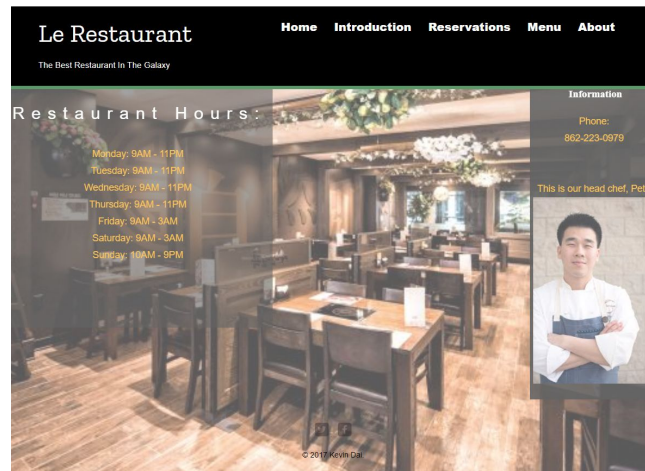

Pricing

Listen...
We as college students know the struggle everyone goes through when trying to save money. Thus, we strive to compete with domestic and international prices in terms of acquiring our product.

Purchase <u>both our mobile and desktop</u> application, for only a small price of:
$299.99

We will add a <u>customized website</u> starting at:
$99.99

We offer <u>professional installation and technical repair services</u> at a flat rate of:
$29.99/hour

You too can have your very own automated restaurant!

Restauration

Tired of waiting for your server?
Tired of always calculating tip?
*Tired of arguing over how much everyone owes?*

<u>Put a stop to it.</u>
**<u>We can help.</u>**

Easy Communication

Seating plans and customer orders are all flawlessly interwoven into our system database so employees can correspond easily through a phone or tablet.

With the mobile and desktop app duo communication between waiters, hosts, kitchen staff, and customers will be greatly facilitated.

Who Are We?

We offer a full software package to automate your restaurant including a Desktop and Mobile application along with a customized website template.

What do we do?

As more and more people decide to eat out instead of cooking at home, restaurants are continuing to grow in size and numbers. Through our technologies, we believe restaurants who are expanding and plan on taking a larger amount of patrons should adopt our Restaurant Automation Software to increase their efficiency, save money and time.
